SUMMARY

An experienced as a Java developer specializing in designing, developing and deploying scalable high-performance applications, with extensive expertise in application development (Spring boot), microservices, network architecture, CI and CD processes, deployment management, cloud environments, and application monitoring. Possesses a proven ability to translate complex requirements into robust technical solutions while ensuring system stability and performance across diverse infrastructures. Led the design and development of secure and scalable microservices, using Java and Spring Boot, enhancing resilience through clustering and load balancing. Automated remediation processes to improve operational stability and reduce recurring incidents, Experience working with distributed search indexes using Apache Solr and Elasticsearch, with deep expertise in shard allocation, replica management and cluster topology for high availability including SolrCloud architecture, collection management . A top performer, who collaborates with cross-functional teams - including QA, product owners, and vendors - to deliver end-to-end milestones in Agile environments. Known for effectively communicating technical challenges to stakeholders and fostering a culture of continuous improvement in fast-paced settings.

TECHNICAL SKILLS

Cloud Technologies: Azure, GCP, AWS, OneOps, looper, Jules, Kubernetes, Kube Console, Docker

Cloud Environments: OneOps, Azure, AWS

Middleware: Kafka, Storm, JMS, RabbitMQ, Service Registry

OSS / NMS Products: ANA/Prime Networks (Cisco), IPSA (Oracle), Comptel Suite (OM, Catalog, SRI, P&A), XDM, IP-RDM

Databases: Cassandra, Solr, Hazzlecast, Oracle, Couchbase, MySQL, Cockroach DB, Elasticsearch

Languages: Java, J2EE, JSON, XML (JAXB, SAX), YML, SQL, PL / SQL, Python

J2EE Technologies: Spring, Spring Boot, JDBC, Servlets, JSPs, Web Services (Soap and REST), GraphQL.

Servers: Tomcat, jBoss App Servers (AS, EAP), WebLogic, WebSphere.

Frameworks: Struts, Hibernate, jBPM, Spring (Core, MVC, Security), Spring Boot, Java Script, HTML, CSS, Angular JS, React JS, Nest JS, Kameleon, TUXEDO, Jest, React Testing Library,

jQuery, Junit, TestNG, Mockito, Cucumber, FitNesse.

Reporting and Tracking Tools: Jira, HPQC, TeamCity, Jenkins, Bitbucket, GIT, Rally, Confluence, Kibana, Elastic Search, Grafana

Tools: Eclipse, IntelliJ, SoapUI, Team City (Jenkins), Bit Bucket, GIT, Kafka Tool, Postman, Dbeaver

Gen AI Tools & platforms: GitHUb Copilot, Claude, Claude Haiku, Claude Sonnet, Claude Opus, GPT-4,5 & Mini, Codex, Ollama, LLaMA3,

Environments: Linux, Unix, Windows and IOS

EXPERIENCE

JPMC USA

FSD 2025-2026

Designed and executed high-performance software solutions for a critical financial investigation’s platform used for AML, Fraud, and Sanctions monitoring. Led the architectural evolution of a monolithic system into a scalable Micro-Front-End (MFE) and Microservices ecosystem, ensuring secure, synchronous integration with global financial systems. Accountable for producing detailed design artifacts and enforcing coding standards to meet rigorous compliance and resiliency constraints.

Produced high-level architecture and design artifacts for a complex Micro-Front-End ecosystem (React, TypeScript, NestJS), ensuring strict adherence to design constraints and seamless integration with backend services.

Expertise in building full-stack applications using React, Node.js, Next.js, and Angular, ensuring high performance, scalability, and responsiveness.

Designed and implemented RESTful APIs and Microservices using Java Spring Boot, enforcing synchronous data consistency across distributed systems while managing asynchronous audit trails via Kafka.

Executed technical troubleshooting for complex distributed transactions, moving beyond conventional approaches to resolve latency issues in the "Wolverine" High Availability (HPA) resiliency layer.

Architected and developed modular UI applications using React JS, TypeScript, and Nest JS within a Micro Front-End (MFE) architecture, improving frontend release agility and component reusability across 5+ specialized compliance workbenches.

Engineered scalable, distributed microservices leveraging Spring Boot and Node.js to handle complex business logic, financial data orchestration, and end-to-end transaction monitoring.

Designed and optimized high-performance APIs utilizing REST APIs and GraphQL to efficiently bridge MFE modules with secure cloud databases, significantly reducing data fetch latencies.

Optimized database queries and indexing strategies in PostgreSQL and ElasticSearch to enhance data retrieval performance for large-scale applications(microservices).

Redesigned Elasticsearch document search indexes by optimizing shard count, replica strategy, and mapping configurations to reduce search latencies for large-scale RMM monitoring datasets.

Implemented anomaly detection using Random Cut Forest (RCF) on large-scale Elasticsearch datasets to identify outliers and unusual system behavior in real time

Implemented an event-driven auditing engine using Apache Kafka, asynchronously capturing case state deltas (diff history) and logging audit footprints to CockroachDB to comply with organizations federal reporting mandates.

Built secure, cloud-native file processing pipelines integrated with AWS storage solutions to ingest, manage, and safeguard high-volume regulatory documentation and transaction records.

Managed cloud and container-based deployments on Gaia Private Cloud (Kubernetes/EKS) by building CI/CD pipelines in Jenkins and Bitbucket to automate software delivery.

Data Insights & Cloud Infrastructure Proactively identified hidden patterns in system performance using Splunk, Grafana, and Dynatrace, utilizing these insights to refactor database queries in CockroachDB and optimize AWS resource allocation. Managed Cloud and Container-based deployments on Gaia Private Cloud (Kubernetes/EKS), creating CI/CD pipelines in Jenkins/Bitbucket to automate the delivery of secure, compliant software. Designed scalable data models for relational and distributed databases, ensuring efficient storage and retrieval of case evidence in AWS S3 and Elastic Search.

WALMART Sunnyvale, California

S S/w Engineer 2018-2025

Integrated RESTful APIs with react components, ensuring seamless data flow and real-time updates across the application.

Utilized Java for backend logic and API development, enabling secure and scalable communication between front-end and server.

Developed responsive and dynamic user interface using ReactJS, improving the page load speed through optimized component rendering.

Owned and resolved complex, cross-service problems by leading multi-functional teams to drive resolution on major platform migrations(Kafka, Solr, Cassandra) and cloud migrations (Private, public and Hybrid)

Define and developed service-level solutions by translating complex business requirements into robust, scalable, high-performance microservices, using Java, Spring, and Spring Boot driving full lifecycle development from concept to deployment.

Identified opportunities and built strategic roadmaps to enhance core services and introduced new technologies and architecture on MS Azure and Google cloud platforms enhancing scalability and

resilience.

Engineered and deployed containerized microservices using Docker and Kubernetes, reducing infrastructure provisioning time and enabling zero-downtime production deployments.

Developed and supported multithreaded Java applications and microservices using Java and Spring, ensuring reliability and efficiency of core organizational backend APIs.

Designed and optimized CI/CD pipelines using Jenkins, OneOps and Azure DevOps accelerating release cycles from weekly to daily.

Orchestrated production releases across cloud (OneOps, Azure, GCP) and on-premises environments, ensuring seamless delivery with minimal downtime.

Led cross-functional teams (Development, QA, Product and Operations) through complex release cycles; maintained release calendars and communication plans to improve visibility and reduce conflicts.

Drove the adoption of blameless postmortem culture to proactively identify and resolve root causes, preventing the re-occurrence of major issues.

Implemented structured release governance processes including change management, risk assessments, and post-release reviews to enhance quality and compliance.

Maintained system stability during platform migrations (Kafka, Solr, Cassandra) & cloud migrations (Private, public and hybrid); configured CI and CD pipelines (Azure, Looper, Concord, Hygeia), onboarded cloud applications, and integrated monitoring tools (Medusa, Kibana, Grafana) for proactive issue resolution.

Designed, deployed, and optimized cloud-native solutions on MS Azure (AKS, Azure Functions, Azure SQL) and Google Cloud platforms (GKE, Cloud Run, BigQuery), enhancing scalability and resilience.

Integrated Elastic Search and Kibana for real time monitoring and log analysis improving system observability and reducing mean time to resolution (MTR).

Provided technical support and feasibility assessments to business stakeholders, increasing solution adoption rates.

Communicated technical status, risks and issue updates to stakeholders, ensuring transparency and alignment.

Practiced Agile methodologies using JIRA; actively participated in sprint planning and ceremonies, contributing to increased team velocity.

Experienced in designing and optimizing distributed search indexes using Apache Solr and OpenSearch/Elasticsearch (Lucene-based), with deep expertise in shard allocation, replica management, and cluster topology for high-availability search at scale.

Proficient in Lucene core concepts including inverted indexes, segment merging, tokenization,

analyzers, and scoring models (BM25/TF-IDF), enabling fine-grained control over search relevance and query performance.

Hands-on experience with Apache Solr including SolrCloud architecture, collection management, and Zookeeper-based distributed coordination for fault-tolerant, high-availability search deployments.

Proficient in Solr schema design using managed schemas and schema.xml, configuring field types, copyFields, dynamic fields, and custom analyzers/tokenizers built on the Lucene analysis pipeline.

Applied Git version control best practices, ensuring the clean branching strategies and reducing the merge conflicts.

Led disaster recovery (DR) tests and coordinated application management during events, identifying the key system vulnerabilities and implementing solutions to ensure business continuity. Analyzing the application performance during tests and engineering new capabilities to strengthen system support for future DR scenarios.

Provided technical support and feasibility assessments to business stakeholders, which led to increase overall team velocity.

Conducted technical interviews for engineering staff, contributing to a higher performance bar for the team.

SABRE Dallas, Texas

Senior Tech Lead 2017

Analyzed, designed, and implemented a crew management solution for airline scheduling; created technical documentation, including class and sequence diagrams.

Developed back-end microservices and GUI components, using AngularJS, jQuery, Hibernate, and REST and Soap web services with secure integration (OAuth, WS-Security).

Supported CI and CD processes by merging code to Git, troubleshooting build failures, and coordinating issue resolution across on-shore and off-shore teams.

Acted as a liaison between off-shore and on-shore teams, facilitating communication, tracking progress in Rally, and ensuring timely delivery of components.

NOKIA Bangalore, India

Senior Tech Lead, OSS 2016-2017

Led the end-to-end software development life cycle, from gathering and interpreting complex client functional requirements for new service launches to defining data models, building road maps, and ensuring timely solution delivery.

Designed and implemented robust application modules (Provisioning/Billing) using Java/J2EE, Spring, and Hibernate, integrating seamlessly with external systems via APIs and web services

(JAX-RS/Jersey).

Managed comprehensive network service activation and configuration, including device discovery, topology-based monitoring, and service verification on devices using XDM/IP-RDM; leveraged XML for service data preparation and manipulation.

Orchestrated full-spectrum quality assurance and deployment activities, including web service testing (SoapUI), functional and regression testing (Quality Center), code review, merge, and issue resolution during CI and CD workflows.

Drove collaborative efforts with clients, cross-functional teams (on site and offshore), and third-party stakeholders -presenting technical solutions, resolving critical issues, and facilitating customer meetings and training sessions.

Increased system performance by streamlining service provisioning workflows, reducing response times during network device activation and configuration.

Mentored junior developers on coding standards, service integration, and troubleshooting techniques, helping improve overall team performance and code quality.

AT&T CORPORATION Bangalore, India

Tech Lead, OSS 2012-2016

Led end-to-end delivery of technical solutions by transforming functional requirements into detailed technical specifications, building road maps, and ensuring timely, high-quality project execution.

Developed and supported web applications for network element management, using JSP and AngularJS, including GUI components for device hierarchy and configuration views.

Managed network device operations, such as discovery, activation, and configuration verification across various models (ISRG1, ISR G2, ASR); prepared XML-based test data for service activation and testing.

Led functional, system, GUI, sanity, and regression testing activities; performed root-cause analysis of application and log issues (PAL, IPSA), and resolved defects across development and production environments.

Collaborated with global teams (on site and offshore) and third-party stakeholders, effectively communicating designs, resolving complex issues, and ensuring technical alignment across projects.

Provided technical leadership and support, mentoring team members and promoting best practices in coding, design, and troubleshooting.

CISCO Bangalore, India

Java Developer 2008-2012

As a Software Engineer Led implementation of NMS and EMS solutions for Tier-1 telecommunications clients (e.g., Telefonica, BT, Neutral Tandem), enabling flow-through

provisioning for services such as MPLS L3VPN and Carrier Ethernet.

Developed core NMS and EMS functionalities and web-based applications, using Java/J2EE, supporting network element interaction (ANA), provisioning workflows, and OSS and BSS integration via NBAPI.

Monitored and maintained network stability by overseeing topology views, interface status, and link health through ANA Network Vision; led application troubleshooting and root-cause analysis.

Translated complex functional requirements into technical designs, supporting both default and custom service provisioning and inventory management for large-scale network deployments.

EDUCATION

NAGARJUNA UNIVERSITY, Andhra Pradesh, India

Master of Computer Applications

OSMANIA UNIVERSITY, Hyderabad, India

B.S., Computer Maintenance and Engineering
